EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001—Advance Statement on Employment and Weekly Earnings—Monthly—Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-002—Employment and Payrolls—Monthly—Price \$3.00 per year

(industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material)

72-003—Man-Hours and Hourly Earnings—Monthly—Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005—Estimates of Labour Income—Monthly—Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1947)

72-006—Hiring and Separation Rates in Certain Industries—Semi-Annual—Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-202—Review of Man-Hours and Hourly Earnings—Annual—Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203—Earnings and Hours of Work in Manufacturing—Annual—Preliminary Report—Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan area)

72-204—Earnings and Hours of Work in Manufacturing—Annual—Final Report—Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings and
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTE ON CHANGES IN PRESENTATION OF DATA

Since January 1959, statistics published in the monthly report *Employment and Payrolls* have been identified by labelling the figures for the last pay period in each month as data for that month. Formerly, statistics based on data for the last pay period in each month had been labelled as of the first of the following month. Annual averages for late years have been revised in accordance with the new system of dating, and are based on statistics for the last pay periods in the months January to December of each year. However, Canada averages for 1949 and earlier years, and provincial and urban area figures for 1952 and earlier years, remain on the old basis and refer to the period January 1 to December 1.

REVIEW OF EMPLOYMENT AND PAYROLLS

1958

COMMENTARY

Industrial employment was lower in 1958 than in 1957. The composite index (1949=100) was 117.9, down 3.8 p.c. from the 1957 average of 122.6. The loss among men was relatively much larger than for women, who are normally concentrated in industries in which employment tends to be relatively stable. Per capita weekly wages and salaries continued to rise, with the 1958 figure reaching \$70.43, up 3.7 p.c. from the 1957 mean of \$67.93. The composite index of payrolls was down slightly, declining from 194.7 in 1957 to 194.1 in 1958.

During 1958, there was little variation in the industrial composite index numbers of employment except for normal seasonal movements. The decline which had developed in the second half of 1957 was arrested early in 1958, and there was some strengthening in the general industrial situation at the end of the year. Nevertheless, the seasonally adjusted composite index declined between June and November. Major drops in employment caused by strikes in several industries had a serious effect during the autumn. The number of employees off work as a direct result of disputes reached a peak of 40,000 during October, with others indirectly affected. Most of these workers were employed by establishments co-operating in the monthly survey.

The employment situation in different industrial divisions varied materially during 1958. In trade and mining, employment exceeded year-earlier levels only in the first quarter of 1958 and then declined. Mining suffered from strikes towards the end of 1958. A downturn had been evident, however, some months before the disputes began. On the other hand, employment continued to expand throughout the year in the service, public utility and finance, insurance and real estate industries. The last two showed some slowing in the rate of growth towards the end of the year, but the index numbers were higher each month than in the corresponding period of 1957. Employment in construction and transportation, storage and communication declined during the first part of the year. The trend was reversed in later months, but the December levels were under those of 1957 in these groups. Manufacturing was slacker in each of the 12 months. The falling off in the year-to-year comparison diminished towards the latter part of 1958, however, and by December amounted only to 2.2 points in the index. Logging was quieter than in any earlier year for a lengthy period, although the December index was slightly above its position 12 months previously.

Average weekly wages and salaries generally rose in 1958, continuing the uninterrupted series of increases recorded since 1939. For the year as a whole, the gain over 1957 amounted to 3.7 p.c. and

the index advanced to 163.9. However, the rate of increase was below the average annual gain of 5.8 p.c. recorded in the last decade.

The monthly payroll composite indexes, except for April and May 1958, were below comparable 1957 levels until the latter part of the year. The 1958 average showed a decline of 0.3 p.c., which compares with a reduction of 0.1 p.c. for 1954, the only other year in which the post-war advance was checked. Reductions as compared with the preceding 12 months in levels of employment and in hours worked in 1958 were only partly offset by higher wage rates. The payroll index turned up sharply at year-end, and at 186.5 at the end of December, was 2.4 p.c. above the figure for the same month of 1957, probably due in part to pay-rate adjustments arranged in the final months of 1958, in some instances upon settlement of disputes. Increased cost-of-living allowances were also a factor in some industries.

Prices of consumer goods and services continued to rise in 1958, although more slowly than during the preceding year, and the purchasing power of earnings showed little change. Average weekly wages and salaries in constant (1949) dollars rose by only 0.2 p.c. during 1958, registering the smallest gain in the 1948-58 period.

Employment of Men and Women

With declines in industrial employment during 1958 for both men and women, the proportion of women workers on the payrolls of the reporting establishments rose. The general index for the latter sex, at 122.0, was off 1.7 points from a year earlier, while that for men fell by 5.6 points, to 116.7. The average proportion of women in the year advanced to 23.3 p.c. from 22.7 p.c. for 1957, establishing a new post-war peak. In manufacturing, the 1958 figure of 22.5 p.c. was the highest since 1951. The growth in 1958 in these proportions appears to be the outcome of three developments. One is seemingly long run in nature, while the other two bear mainly cyclical characteristics. First, the importance of those non-manufacturing industries which employ large numbers of women has risen in recent years. Secondly, certain manufacturing industries employing many women—food and beverages, tobacco and tobacco products, and leather goods—were either less affected by the adverse economic conditions of 1958 than other industries, or reported earlier improvement. Thirdly, a majority of manufacturing industries in which employment did not recover during 1958 showed an increase in the proportion of women on payrolls, no doubt reflecting greater losses among wage-earners (largely men) than among the salaried group to which the women employed in these industries largely belong.

Employment by Industry

The severe drop in manufacturing employment recorded in the latter part of 1957 was arrested during the first few months of 1958, followed by moderate improvement which tended to accelerate towards the year-end. These movements brought the seasonally adjusted index to 110.1, only 2.2 p.c. below the December level for 1957.

Employment in the durable and non-durable sectors of manufacturing showed widely diverging patterns. In the case of durables, the upturn of the last 3 months of 1958 was not sufficiently vigorous to carry employment past the level at the end of 1957. The December 1958, index was 113.7, after seasonal adjustment, still 5.5 p.c. below the comparable figure for the preceding year. Most industries participated in the upturn to some degree, but only wood and non-metallic mineral products continued throughout 1958 the expansive movement begun late in 1957.

Activity in iron and steel was affected by strikes taking place during the latter part of 1958, but in general, employment in this sector lacked buoyancy throughout the year. The index reached 102.4 in December, as against 105.3 a year earlier. Within the group, employment in establishments manufacturing agricultural implements resumed its pronounced upward trend in the second half, and by the end of 1958, the index for these establishments reached 65.5, or a level 5.8 p.c. above that of 1957. Improvement was less marked in most other categories within the iron and steel group, although employment therein continued higher in relation to 1949 than in farm implements. The number of workers employed by iron casting and machinery manufacturers, however, continued to decrease throughout the year, notably in the latter group, in which the December 1958 index was 9 p.c. lower than in the same month in 1957.

In contrast with limited improvement for durables during 1958 that nevertheless left the year-end index below its position 12 months earlier, employment in the non-durable industries resumed its upward trend early in the year, arresting the series of declines that had commenced in 1957. By December, the seasonally adjusted index, at 106.5, was 1.5 p.c. above the figure for the same period a year earlier.

Employment in textiles recovered considerably during the second half of 1958, in response to increased activity in the manufacture of synthetic textiles and silk and cotton yarn and broad woven goods. For the textile group as a whole, however, the year-end index (78.2) was 1.4 p.c. below the December 1957 figure. In the woollen goods component, employment continued to fall throughout the year, though at a slower rate than in the preceding 12 months. The downward trend of 1957 in the clothing industry was reversed, with expansion in the second half of 1958. The index for clothing manufacturers reached 87.3 at the end of December,

regaining the level for the same month in 1957. Employment in paper products also began to expand towards the end of 1958, while that in petroleum and coal products resumed the upward trend of the recent past, though at somewhat lower rate.

On the other hand, slackness in rubber goods, printing, publishing and allied industries and chemical products was in evidence throughout 1958. In the case of the first two groups, the reduction continued the downturn of 1957, but that in employment in chemical products appeared only at the beginning of 1958, and persisted throughout the year, in the face of the over-all industrial improvement evident in the non-durable manufacturing industries in the second half. The contraction in employment in chemicals is the first interruption in the upward movement since 1946.

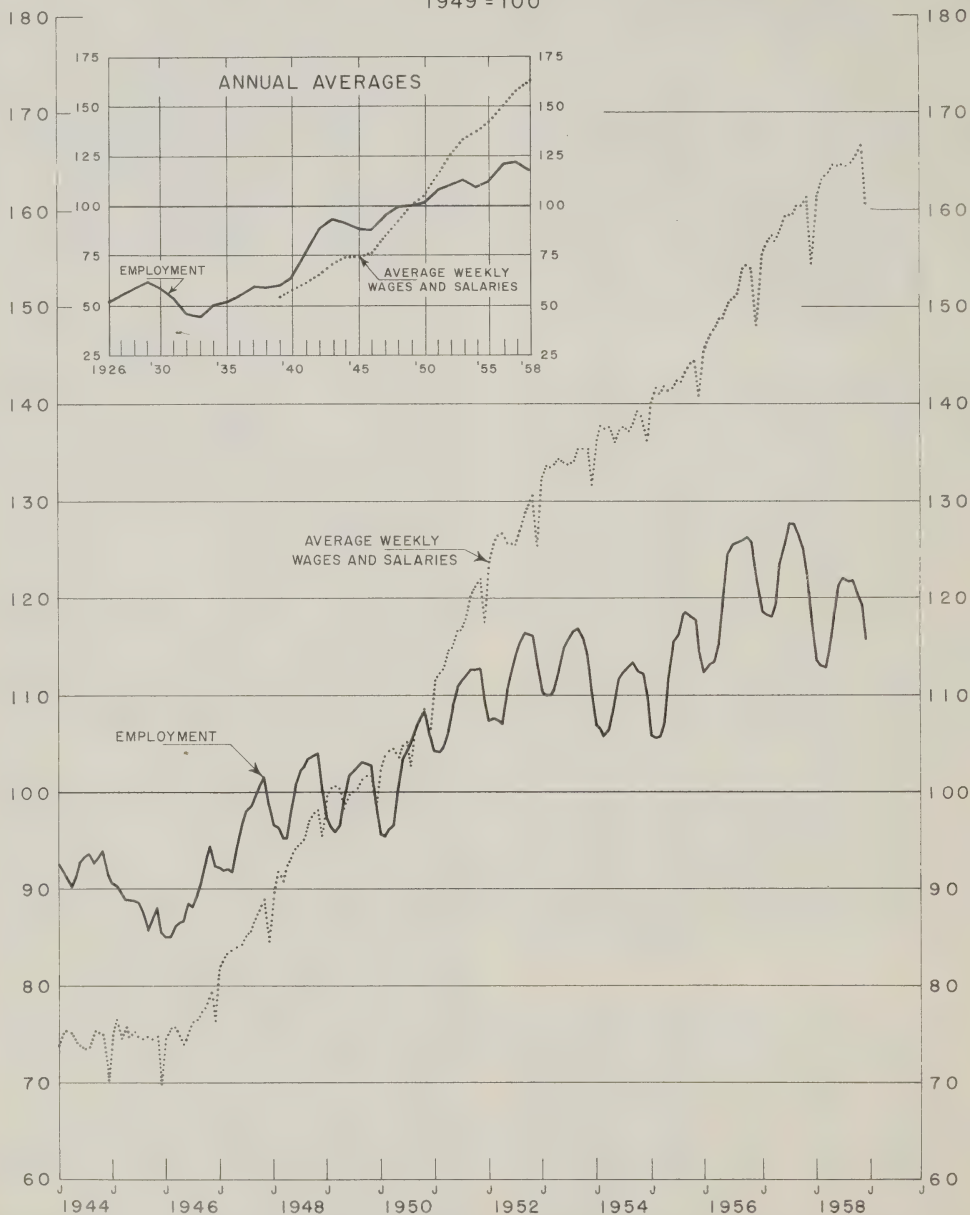

Strength in consumer demand was reflected in expansion or stability of employment in other industrial divisions either directly serving consumers, or associated with establishments directly satisfying consumer demand. The service industry showed the most rapid rate of advance, and the index at the year-end rose over December 1957 by 3.4 p.c., to 131.8. Employment in finance, insurance and real estate also increased throughout 1958, though at a somewhat slower rate than during the recent past, registering a gain of 2.4 p.c. at the end of December, when the index reached 151.4. The trade group showed virtually no change in the 12 months. The index, at 140.7 at the year-end, was practically the same as in December 1957. This levelling after years of advance, took place in wholesale trade, staffs in retail stores continuing to expand. Employment in public utility operation did not turn down until the end of the first quarter, but recovered subsequently and by the end of December the index rose to 134.7, up fractionally from the comparable 1957 level.

Employment in the transportation, storage and communication group showed a downward trend throughout most of 1958. At the end of the year, the index for these establishments, (112.5) was 3.1 p.c. lower than in December 1957. The decline took place mainly in communications, water transportation and steam railways, and in the latter two, continued the downward trend of recent years. Although employment in communications was lower at the end of 1958 than 12 months earlier, the annual index, at 171.0, was 3.6 points higher. Work forces in the trucking industry continued to expand, and the storage group also exhibited an upward trend throughout 1958.

Other non-manufacturing industries showed diverging patterns. A slowdown in capital formation reduced employment in building and general engineering construction. This decline was largely responsible for a lower employment index in construction as a whole than in 1957. At the end of December, the index stood at 108.0, showing a drop of 3 p.c. in the 12-month comparison. Over the year, however, the reduction averaged 7 p.c. In contrast,

the number of workers reported monthly in the building of highways, streets and bridges was higher than during 1957. Activity in residential construction was also at a high level, the number of the new dwellings constructed during the year establishing a record. Because of the small scale on which many residential contractors operate, the coverage of such work in the employment survey is low and the growth in employment in this sector in recent years is not fully reflected in the monthly surveys, limited to establishments usually employing 15 persons and over.

In mining, the high level of employment of the latter part of 1957 continued for the first few months of 1958. A brief decline followed, which was arrested at mid-year, and there was some indication of an upward tendency in the latter months but the situation was obscured by strikes. Throughout the year, however, uranium mining, only, continued to expand work forces, providing most of the strength shown in the group as a whole. This sector was not affected by strikes.

Employment in forestry industry showed a slightly upward tendency throughout most of 1958, and at year-end the index, at 89.5, was higher by 3.1 p.c. than in December 1957. However, the index for the year was the lowest since 1939.

Employment by Provinces

Employment in the Atlantic Provinces showed dissimilar movements during 1958, although the annual indexes in the four areas were all lower than in the preceding year. The industrial composite indexes in Prince Edward Island and New Brunswick turned upward early in 1958, and maintained their advance. In Prince Edward Island, the gain over 1957 at year-end was 8.4 p.c., the index reaching 115.6. The improvement in New Brunswick was less pronounced, and the December index rose in the year by 2.7 p.c., to 100.5, largely due to a rapid increase in activity in construction, as well as some support from several other industries. The exception was transportation, storage and communications. Despite increases in construction and in transportation, storage and communications in Nova Scotia at the year-end, employment there did not follow the pattern of the other Maritime Provinces, largely due to cut-backs in mining and manufacturing. The industrial composite index of employment moved downward throughout most of 1958, with only minor improvement toward the close of the year. As a result, the index, at 94.6 at the end of December, was 1.8 p.c. below the comparable level for 1957. Employment in Newfoundland also failed to show improvement, and the index (112.5) was 3.1

p.c. lower at the end of 1958 than in December of the preceding year.

Industrial composite indexes of employment in both Quebec and Ontario were down at the year-end from comparable levels for 1957. The annual averages were also lower. In percentage terms, the decline was more pronounced in Quebec, mainly due to curtailment in manufacturing. However, gains in employment in trade, services and finance, insurance and real estate modified the extent of the general decline. The composite index for this province moved upward early in the second half of 1958, but not sufficiently to overcome earlier losses. At 114.4 at the end of December, the index was 2.2 p.c. lower than in the same month in 1957. In Ontario, the recovery lagged behind that of Quebec, but the decline on the whole was less pronounced. The downward movement in a December-to-December comparison was mainly attributable to a steep drop in mining employment and in construction, both seriously affected by strikes towards the end of the year. In spite of important labour disputes, the industrial composite index of employment for Ontario stood at 118.0 at the end of December, only 1.9 p.c. below the corresponding figure for 1957.

Employment in the Prairie Provinces showed improvement throughout most of 1958 as compared with a year earlier. In Manitoba, expansion in construction as well as gains in most other industries early in 1958, caused a reversal of the downward trend of 1957. By the end of the year, the index reached 107.9, slightly exceeding the figure for the comparable period of 1957. Employment in Saskatchewan continued to increase throughout the year, supported in particular by gains in construction. By the end of December, the index reached 123.1, or 1.7 p.c. higher than for the same month in 1957. In Alberta, employment also advanced throughout the year, despite a sharp cut-back in mining. The gain was attributable mainly to high levels of activity in construction, trade, services and manufacturing. The index of employment for all industries rose to 148.4 at the year-end, up 1.2 p.c. in the 12-month comparison.

In British Columbia, employment failed to recover all the ground lost in 1957 although the downward trend was arrested early in the year. The reversal was mainly attributable to partial recovery in forestry and manufacturing, with smaller gains in finance, insurance and real estate. These increases, however, did not completely offset downward tendencies in other industries in which employment was lower at the end of December than a year earlier, with the result that the December industrial composite index, at 110.9, was fractionally below the figure recorded 12 months previously.

NOTES

General.—The monthly surveys of employment and weekly payrolls relate to all branches of the industries listed in the table given in the following industrial coverage statement, except services, in which the industries represented consist mainly of hotels, restaurants, laundries and dry-cleaning establishments, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, the number of which is very large in relation to their employee totals; establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested from all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage.—Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in the provinces and the cities for which data are segregated. The industrial representation, though large, is more uneven, the proportion of workers covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken. In 1951, data were not segregated for paid workers actually at work. The following estimates of coverage in the monthly surveys therefore are conservative since they relate employees of the reporting firms to all employees with jobs, including those absent from work without pay, so that they would not have been included in the monthly statistics of employment, payrolls and man-hours;

Estimated Industrial Coverage, June 1, 1951

Division	P.C.
Forestry (chiefly logging)	75
Mining (includes milling, quarrying, oil wells)	96
Manufacturing	89
Transportation, storage and communication	89
Construction	81
Public utilities	67
Trade	60
Finance, insurance and real estate	82
Services (specified industries only)	40*
All industries included	78

The coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are represented, approximates 59 p.c.

* Mainly hotels, restaurants, laundries, dry-cleaning plants, business service and recreation service.

It is important to note that the statistics of employees reported, as published in the monthly bulletins, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers at the indicated dates, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested, before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

3. The Processing.—Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishments operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the co-operating firms. The workers reported are not necessarily employed for a period of a week by any one establishment. In order to reduce duplication in the statistics of employment where individuals may appear on the payrolls of more than one employer in a period of several weeks, respondents are asked to furnish data only for the last pay period in the month for their various classes of employees.

4. The Tabulation.—The material tabulated each month shows the number of workers drawing pay from the establishments furnishing returns, and

the weekly earnings of such employees, with similar information for the men and women employed by the same firms a month earlier, and in the basic period (1949). The statistics of the first tabulation for each month are preliminary; the re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated, and the inclusion of returns received too late for the preliminary tabulation.

5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between the employees of the establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employers. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added to the mailing list, have been incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries.—The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full-time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to

basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods. i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to unemployment insurance, workmen's compensation and other welfare funds. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), pensions, retirement gratuities, etc.

The revised figures of earnings in the monthly bulletins incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

7. Urban Area Statistics published in the present report include data for establishments situated in the metropolitan and urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages", except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above-named publication include Iberville with St. Jean, Nitro with Valleyfield and Preston with Galt.

8. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom the reporting employers keep record of hours worked are contained in the monthly bulletins on man-hours and hourly earnings.
